

## Connected Ceiling Fans Category Scope

This category is intended to be inclusive of all residential connected ceiling fan applications. Products must be available for sale by retailers serving the residential new construction and major renovation markets in the United States and Canada. If an entry is comprised of components from more than one manufacturer, the competition encourages collaboration in the submission of the entry. This category includes ceiling fans with or without lighting.

The Competition is open to products with primary applicability in the residential sector, or in residential-style applications such as hospitality and assisted living environments. Ceiling fans intended for indoor or outdoor applications are eligible to enter.

The Competition is intended to highlight connected residential ceiling fans available for purchase in 2021. As such, products available or planned for introduction to the market between January 1, 2019 and December 31, 2021 are eligible to enter the 2021 Competition.

If a manufacturer is interested in submitting a product family, the Competition recommends that you select a single product that is representative of the product family and note in the submission form that the single entry is part of a larger family. Manufacturers are also invited to submit images of other products within the family as well as marketing materials that show the product family.

If you are unsure whether your product falls within the category scope or have additional questions, please reach out to Kim Katz at [competition@ceel.org](mailto:competition@ceel.org).

## Desired Capabilities

The Integrated Home Competition is seeking connected ceiling fans that help customers manage their energy use. It is not expected that entries will include all of the following, but some qualities and capabilities that are desired include:

- Low standby power based on functionality provided (less than 0.5W preferred). Standby power refers to the power consumption of the product when the product is not engaged in an “on” state, but the connected functionality remains online.
- Energy management, which encompasses features that reduce the product’s overall energy consumption levels either through core product functionality or influencing customer behavior.
  - Energy consumption information for users, including remote access via an app, website, or home energy management system.
  - Programmable settings, such as vacation, away, or nighttime modes that reduce energy use.

# 2021 Connected Ceiling Fans Guide

- Ceiling fans are expected to meet [ENERGY STAR Program Requirements](#).

Type	Size (diameter) (in.)	Minimum Efficiency (cfm/W)	Minimum High-Speed Airflow (cfm)
Ceiling Fan	$D \leq 36$ inches	$\geq 0.72 * D + 41.93$	$\geq 1767$
	36 inches < $D < 78$ inches	$\geq 2.63 * D - 26.83$	$\geq 250 * \pi * (D/24)^2$
	$D \geq 78$ inches	$\geq 2.63 * D - 26.83$	$\geq 8296$
Hugger Ceiling Fan	$D \leq 36$ inches	$\geq 0.31 * D + 36.84$	$\geq 1414$
	36 inches < $D < 78$ inches	$\geq 1.75 * D - 15$	$\geq 200 * \pi * (D/24)^2$
	$D \geq 78$ inches	$\geq 1.75 * D - 15$	$\geq 6637$

- If a light kit is included, it is also expected to meet [ENERGY STAR Program Requirements](#).

Type of Light Kit	Minimum Efficacy (lumens/W)	Minimum Light Output (lumens)
Shipped with ENERGY STAR certified light bulbs	65.0	N/A
Separable Light Source	65.0	800
Integrated Light Source	70.0	800

- Color tuning and dimming capabilities.
- Ability to receive and respond to a utility or third-party signal (i.e. pricing signal or curtailment signal).
  - Data sharing with consumer-authorized third parties, including operational status and energy consumption reporting.
- Sensing capabilities to optimize ceiling fan operation based on occupancy, indoor temperature, geofencing, motion sensing, or infrared signal sensing.
- Consumer customization, such as:
  - The ability to input preferences and parameters related to product operation.
  - The ability to tailor notifications for events like device status, system failures, power surges, or planned device shutdowns.
- Continued functionality when cloud connection is lost.
- Ability to operate seamlessly with other connected devices, systems, and platforms within the home.
- Ongoing, active management of settings through features like automatic scheduling or learning-based schedule creation based on consumer preferences and habits.
- Simplified device set up and use, including installation and account set up.
- Intuitive consumer operation through multiple interfaces.

# 2021 Connected Ceiling Fans Guide

- Product resiliency, which encompasses features that enable the product to prepare and plan for, absorb, recover from, and more successfully adapt to adverse events (such as battery backup operation or durable components).

Again, it is not expected that entries will include all the above capabilities; rather, products should include measures that save energy and provide a positive consumer experience. Additional capabilities beyond this list will also be considered in the judging process. Products with greater functionality generally receive more points (see the [Judging Criteria](#) for more information).

## Entry Requirements

- Complete submission form
- Entries selected for live judging (Finalists):
  - Must ship products to the judging location. For more information, please see the [Shipping Instructions](#) document.
  - Product entries must be submitted in a format that demonstrates how they would work within a typical home, including if they are part of a larger system.
- If selected as a Winner, entrants must:
  - Provide laboratory reports for energy performance.
  - Complete a cybersecurity questionnaire, with the possibility of a follow up interview.

## Awards for Connected Lighting and Lighting Controls

Products will likely be awarded at Lightovation: Dallas International Lighting Show, January 2022, subject to change. Winners will also be promoted through press releases to both consumer and trade publications and among CEE members, the Integrated Home Competition website, CEE Meetings, and materials at key industry events. In addition, CEE member efficiency program administrators may choose to recommend winning entries to their customers.
